PROFILE

Senior full stack engineer (frontend-focused) with 5+ years of deep expertise in React, Next.js, TypeScript, and Node.js, and a track record of owning products end to end — scoping with stakeholders, architecting the solution, and driving delivery.

My recent focus has been building AI into production software. I designed and shipped the AI assistant at the core of Xertify's flagship multi-tenant platform: an SSE-streamed chat experience with conversation history and resume-context handling across Anthropic Claude, Google ADK agents, and Gemini, serving enterprise and university clients alongside a granular per-tenant RBAC and SSO layer I also built. Earlier, at Globant, I brought Claude-based automated code review into the CI/CD pipeline and cut review turnaround by 30%.

That sits on top of measurable engineering delivery — a 57% Time to Interactive improvement on the NFL+ streaming platform and 85% unit-test coverage on a global Ernst & Young tool — and a habit of raising standards through architecture reviews, performance work, testing, and mentorship.

CORE COMPETENCIES

- Languages & Frameworks: TypeScript, JavaScript, React, Next.js (App Router, v15/16), Node.js, HTML5, CSS3
- AI & LLM Integration: LLM and agent integration in production, Anthropic Claude, Google ADK agents, Gemini, SSE-streamed chat interfaces, conversation and context management, AI-assisted development (Claude Code, Cursor)
- Architecture & Security: Multi-tenant SaaS, granular RBAC, JWT, OAuth, Microsoft/Google SSO, performance optimization, accessibility, SEO
- State & Data: Redux, Zustand, TanStack React Query, React Hook Form, Zod, MySQL, PostgreSQL, REST APIs, repository-pattern data layers
- Cloud, CI/CD & Testing: AWS (ECR, SQS), Docker, GitHub Actions, Firebase, Vitest, Jest, Playwright, Storybook, Git

PROFESSIONAL EXPERIENCE

Senior Full Stack (Frontend Oriented) Software Engineer Xertify — Xertiflow

Medellin, Colombia
February 2026 – Present

- Own the entire frontend of the company's flagship AI LLM platform — a multi-tenant system for submitting, routing, and tracking administrative requests — delivered to enterprise and university clients including Universidad del Rosario and Universidad de los Andes, holding all frontend architecture decisions.
- Architected the multi-tenant frontend on Next.js 16 (App Router): subdomain-based tenant routing and isolation, and a shared component system serving distinct tenant experiences from a single codebase.
- Designed and shipped the platform's AI assistant: a real-time chat experience with conversation history and resume-context handling, integrated across three LLM and agent providers (Anthropic Claude, Google ADK agents, Gemini), with live notifications over WebSockets.
- Built the authentication layer: dual-token auth (Firebase Auth + custom JWT) with Microsoft and Google SSO, plus an unauthenticated path for case-status lookup by filing number.
- Designed a granular RBAC system with per-tenant roles and profiles driving live permission gating, conditional UI rendering, and access control throughout the application.
- Built the request-intake and case-tracking workflows (React Hook Form + Zod) powering both the customer and admin applications, and owned state and data-flow architecture (Zustand, React Query) over a repository-pattern MySQL layer.

- Partnered directly with client stakeholders to gather requirements, define scope, and negotiate technical tradeoffs, timelines, information architecture, and delivery structure.
- Delivered a scheduling and capacity-planning calendar module, and established Vitest/Playwright coverage as the team's testing standard.
- Supported containerized deployment for both applications: multi-stage Docker builds (Next.js standalone) shipped to Amazon ECR via a GitHub Actions CI/CD pipeline.

Semi-Senior Advanced Frontend Engineer → Senior Frontend Software Engineer
Globant

Medellin, Colombia
 January 2024 – January 2026

Senior Frontend Software Engineer — NFL+ account (May 2025 - January 2026)

- Drove frontend architecture and technical decisions for the NFL+ streaming platform (Next.js 15), defining patterns and standards adopted across the team
- Led a performance initiative that improved Time to Interactive by 57% through SSR, dynamic imports, lazy loading, and memoization strategy
- Collaborated the integration of Claude-based automated code review into the CI/CD pipeline, cutting review turnaround by 30% and standardizing quality gates on every PR
- Partnered with product and business stakeholders to translate requirements into technical strategy, estimates, and architectural guidelines
- Established a component documentation and testing standard with Storybook (100% coverage of new UI components) and enforced quality through architecture and PR reviews
- Mentored engineers on architecture, performance, and code quality

Semi-Senior Advanced Frontend Engineer — Ernst & Young account (January 2024 - April 2025)

- Led refactoring of large-scale components in a regression-analysis platform (React, TypeScript), prioritizing performance and accessibility
- Drove the tool from a regional (Germany-based) deployment to global release within a federated development environment
- Achieved 85% unit-test coverage (Vitest), personally owning 35% of the suite; oversaw integration of third-party and external-team components

Earlier Experience
Full Stack Web Developer

Bogotá, Colombia
 January 2021 – November 2023

- Studio5 — Full Stack Developer · 2023 — Led development of a MERN e-commerce platform with payment integrations, performance/SEO optimization, and full unit-test coverage
- Freelance & Startups (Myjou, Sunquwan) — Full Stack Developer · 2021 – 2023 — Built MVPs and e-commerce apps from scratch: OAuth, WebSockets/real-time features, and payment gateways (PayPal, MercadoPago)

Languages: English (Advanced - C1) | Spanish (Native - C2)

Education

Universidad Nacional de Colombia
 Business Management

Bogotá, Colombia
 December 2019
